

ABSTRACT OF THE DISCLOSURE

A system and method for validating data entry in which an exception set class is defined and where, during a validation process, each data entry field is reviewed to determined whether or not certain predetermined validation criteria are met. Where
5 data entry does not meet validation criteria, an exception is added to the exception set class to identify the data entry field that contains data that does not meet the validation criteria. After all data entry fields have been reviewed, the exception set is thrown if it contains any exceptions. Based upon this exception set, the data entry fields will be re-presented (submitted) to the user for correction/revision of the data to
10 meet the validation criteria.
